Acute dyspnea in the office. - Abstract - Europe PMC

Dyspnea, or shortness of breath, is a commonly reported symptom in acute care and outpatient settings. Causes of dyspnea include pulmonary (e.g., pneumonia, asthma exacerbation), cardiac (e.g., acute coronary syndrome, congestive heart failure), toxic-metabolic (e.g., metabolic acidosis, medications), and upper airway (e.g., epiglottitis, foreign body) pathologies.

Dyspnea - Knowledge for medical students and physicians

INTRODUCTION. Dyspnea, or breathing discomfort, is a common symptom that afflicts millions of patients with pulmonary disease and may be the primary manifestation of lung disease, myocardial ischemia or dysfunction, anemia, neuromuscular disorders, obesity, or deconditioning. Examination of the language of dyspnea suggests that this symptom represents a number of qualitatively distinct sensations, and that the words utilized by patients to describe their breathing discomfort may provide ...

UpToDate

Dyspnea is a normal symptom of heavy exertion but becomes pathological if it occurs in unexpected situations or light exertion. In 85% of cases it is due to asthma, pneumonia, cardiac ischemia, interstitial lung disease, congestive heart failure, chronic obstructive pulmonary disease, or psychogenic causes, such as panic disorder and anxiety.

Shortness of breath - Wikipedia

When evaluating a dyspneic patient in the office, a quick initial assessment of the airway, breathing, and circulation, while gathering a brief history and focused physical examination are necessary. Most often, an acute cardiopulmonary disorder, such as CHF, cardiac ischemia, pneumonia, asthma, or COPD exacerbation, can be identified and treated.
