Algebraic Geometry I Complex Projective

In the period 1930-1960, under the leadership of Zariski, Weil, and (towards the end) Grothendieck, an immense program was launched to introduce systematically the tools of commutative algebra into algebraic geometry and to find a common language in which to talk, for instance, of projective varieties over characteristic p fields as well as over the complex numbers.

Complex Algebraic Geometry: Varieties Aaron Bertram, 2010 3. Projective Varieties. To rst approximation, a projective variety is the locus of zeroes of a system of homogeneous polynomials: $F_1 = \dots = F_m = 0$ in projective n -space. More precisely, a projective variety is an abstract variety that is isomorphic to a variety determined ...

MA4A5 Algebraic Geometry

Algebraic geometry is a branch of mathematics, classically studying zeros of multivariate polynomials. Modern algebraic geometry is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometrical problems about these sets of zeros.. The fundamental objects of study in algebraic geometry are algebraic varieties, which are geometric manifestations of ...

Algebraic geometry - Wikipedia

In algebraic geometry, a projective variety over an algebraically closed field k is a subset of some projective n -space over k that is the zero-locus of some finite family of homogeneous polynomials of $n + 1$ variables with coefficients in k , that generate a prime ideal, the defining ideal of the variety. Equivalently, an algebraic variety is projective if it can be embedded as a Zariski closed

fact that it can appear as fundamental group of a complex algebraic manifold. Most nitely presented groups cannot be projective groups, i.e., π_1 of a complex projective manifold. E.g., free abelian groups of odd rank (Hint: use Hodge theory). By contrast, Taubes(1992) showed that every nitely presented group is π_1

This is a broad graduate level course on complex algebraic geometry on 7.5 credits. The course is primarily intended for PhD students in analysis and other non-algebraic subjects. We will also almost exclusively take an analytic viewpoint: that is, work with holomorphic functions and complex manifolds rather than commutative algebra.
