INTRODUCTION. Young adults who are at the prime of their health tend to despise or be apathetic about the presence of bacteria, partially due to the latter's over-exaggerated connection to diseases and invisibility to the naked eye.Consequently, professors who teach microbiology to nonscience major college students may face an audience with low motivation and fear of scientific terminology.

- [Instructor] Talk a little bit about biogeochemical cycles. And the term biogeochemical sounds very fancy. But really these are just cycles that involve different molecules that are essential for life and how they circulate through and an ecosystem and really how they circulate through the entire, through an entire biosphere.
