Blood doping is the practice of boosting the number of red blood cells in the bloodstream in order to enhance athletic performance. Because such blood cells carry oxygen from the lungs to the muscles, a higher concentration in the blood can improve an athlete's aerobic capacity (VO 2 max) and endurance. Blood doping can be achieved by making the body produce more red blood cells itself using ...

In the more common "clinical" or "sul1-type" class 1 integrons, part of the tni region has been replaced by the 3' conserved segment (3'-CS) (Fig. 4B). The longest versions of the 3'-CS include the qacEΔ1 gene, derived from the qacE cassette, and sul1 (encoding resistance to the early sulfonamide antibiotics), but only part of ...

Kolloidales Silber - Wirkung, Anwendung und Dosierung

Non-communicable diseases (NCDs) have risen to become the greatest contributors to burden of disease globally, accounting for two thirds of all deaths (34.5 million [1]) and 54% of disability adjusted life years (DALYs; 1.3 billion [1]) in 2010. In high-income countries this proportion is typically much higher, reaching 87% in western Europe [1]. Two of the most common causes of NCDs, alcohol use ...
