## How to Order Guides | HID Global

Human Interface Devices (HID) is a device class definition to replace PS/2-style connectors with a generic USB driver to support HID devices such as keyboards, mice, game controllers, etc. Prior to HID, devices could only utilize strictly-defined protocols for mice and keyboards. Hardware innovation required either overloading data in an existing protocol or creating non-standard hardware with its own specialized driver.

Installation Guide for HID & LED Headlights. Find your step-by-step installation guide for your HID and LED products below. Make sure to select the appropriate guide based on your purchased product and accessories. If you need further assistance feel free to contact us.

## **Installation Guide for HID & LED Headlights | XenonHIDs.com**

The first that made the jump was HID (High-Intensity Discharge) technology, also known as xenon lights. This technology greatly improved on halogen bulbs, both on light intensity and energy consumption. HID or xenon lights were first introduced to the general public in 1991 with the launch of the then-new BMW 7-Series.

## **HID Signo Reader Installation Guide**

The system-supplied HID class driver registers an instance of this device interface class for a HID collection. For example, the HID class driver registers an interface for a USB keyboard or mouse device. Access a HID collection by using the I/O interface supported by the HID class driver. For information about HID

devices and drivers, see HIDClass Devices.
