Growth in an organism is carefully controlled by regulating the cell cycle. In plants, the roots continue to grow as they search for water and nutrients. These regions of growth are good for studying the cell cycle because at any given time, you can find cells that are undergoing mitosis. In order to examine cells in the tip of an onion root, a thin slice of the root is placed onto a microscope slide and stained so the chromosomes will be visible.

LAB EXPERIMENT 4: Mitosis in Onion Root Tip Cells Objective After completing this exercise, you should be able to: 1. Better understand the process and stages of mitosis. 2. Prepare your own specimens of onion root in which you can visualize all of the stages of mitosis. 3.

LAB EXPERIMENT 4: Mitosis in Onion Root Tip Cells

Mitosis in Onion Root Tip Cells. A quick overview of cell division. The genetic information of plants, animals and other eukaryotic organisms resides in several (or many) individual DNA molecules, or chromosomes. For example, each human cell possesses 46 chromosomes, while each cell of an onion possesses 8 chromosomes.

1 Onion Cell Mitosis: Onion Cell Mitosis Lab Instructions. Background: In a growing plant root, the cells at the tip of the root are constantly dividing to allow the root to grow. Because each cell divides independently of the others, a root tip contains cells at different stages of the cell cycle. This makes a root tip an excellent tissue to study the stages of cell division.

Onion Cell Mitosis Lab Instructions - George West Pri

Cell division occurs rapidly in growing root tips of sprouting seeds or bulbs. The most commonly used root tips in labs to study mitosis are onion, wheat, lentil, barley and alfalfa. An onion root tip is a rapidly growing part of the onion and thus many cells will be in different stages of mitosis.

Onion Root Tip Lab Report: Hannah Scott Biology Ms. Carpenter February 25, 2013. Problem, Hypothesis and Prediction In this lab experiment, Hannah was to analyze an onion root tip under a microscope to observe the mitotic stages that occur in the cells of onion root tips. The problem was, at what rate does mitosis occur in different parts of the onion root?

In Mr. Wong's 7th period bio-honors class, we did a lab experiment on the processes of mitosis and the different phases as seen under a microscope. The objective of this experiment was to calculate the percentage of cells in each of the phases of mitosis. There were two different slides, one of onion root tip and one of whitefish blastula.
